## SPECIAL PACKING FOR LINING OUT EVERGREENS

For many years we have used our special method of grading and packing all smaller stock—a method which insures that your stock will be a uniform strong grade and delivered in perfect condition regardless of distance. The stock is dug fresh for each individual order, roots carefully puddled and graded in the fields, then brought to the packing shed, and regraded over the table.

Your stock is then tied in bundles carefully packed in damp moss and each bundle wrapped in waterproof paper. The middle of the bundle cannot dry out nor heat. The shipment can be taken directly to your fields and planted from the box without any risk of drying out or exposure to the air, because the bundle is small and of convenient size.

## POTTED EVERGREEN LINERS

Well rooted stock—from 2¼ inch pots.

SPECIAL ATTENTION: Please note WE not only mention size of pot but most particularly SIZE OF STOCK.

## PHLOX—LINERS

Our lining out Baby Phlox are plants that have been grown in the greenhouse and will be ready for transplanting into the open field about April 15. They should be transplanted just as soon as the soil and weather conditions will permit. We have grown our Phlox in this manner for a number of years and we have had the best of success. They are not potted, but the roots will have sufficient dirt and they will be packed in such a way as to reach destination in prime condition. We offer the following varieties.
